- Insert SaveDefinitions → True as an option to Manipulate into the .nb file.
- Save file as .cdf file.
- Click Evaluation, then Evaluate File.
- In the .cdf file, select all the cells *except the output of Manipulate*, Click Cell, the click Cell Properties, then *uncheck* Open.
- Click Format, then Style, then in the box that appears click Other . Type PluginEmbeddedContent if it is not already there, then click OK.
- Click Format, click Option Inspector. Pull down the menu for Selection. One of the choices should be the name of your file. Click that.
- If the other pulldown window does not say Category, pull that menu down and click Category.
- Search for ShowCellBracket and click it so that it says False, then click Apply.
- Search for ShowCellLabel and click it so that it says False, then click Apply.
- Search for Deployed and check it True, then click Apply.
